

Mystical Experience

Encounters with Non-Human Intelligence in Mexico, the Origin of Consciousness & the Quantum Consciousness Model: The Sol Collazo Case (Part I)

Raul Valverde*

The Institute of Consciousness and Transpersonal Psychology, Canada

Abstract

Recently, several people in Mexico have revealed their encounters with non-human intelligent beings. Many times, these encounters have the purpose of revealing information related to spirituality, consciousness and cosmology. The quantum consciousness paradigm explains that our consciousness is immortal, non-local and can work independently of the physical brain and supports a multidimensional view of the human mind. The article aims at presenting a model revealed to non-human intelligence contactee, Sol Collazo, that supports the existence of a quantum field that is responsible for the generation of the reality that we perceive. The same model also reveals the different energies that make consciousness and how they interact with this quantum field. The article also presents the experiences of the author including a contact with the Pleiadians that are benevolent beings that serve humanity in our evolution process.

Keywords: Quantum consciousness, quantum field, quantum physics, scientific GOD, non-human intelligent encounter.

1. Introduction

For many years, people have reported non-human intelligence encounters in Mexico. Many of these encounters, according to the contactees, were meant to teach us about the origin of human life, evolution and cosmic plans. These models proposed by these encounters seem to be consistent with the human quantum consciousness model proposed recently by many scholars (Valverde 2016, Hameroff 1994, Penrose, R., & Hameroff, S. 2011).

The intention of the paper is to present the models discovered through research on contactee Sol Collazo in Mexico and a comparison of these models with the quantum consciousness model that explains that our consciousness is immortal, non-local, and independent of the physical brain which supports a multidimensional view of the human mind. The presented model supports the idea of a universal quantum field that interacts with our consciousness for the generations of the

*Correspondence: Raul Valverde, Concordia University, Canada. E-mail: raul.valverde@icstp.org

perceptual reality, the different components of our consciousness are part of this model as a set of quantum energies that interact with each other. The paper also documents a non-human intelligence encounter that the author witnessed with the Pleiadians, these non-human intelligent beings provide service to humanity with the purpose to support our evolution process according to the contactee Sol Collazo.

2. Quantum Consciousness Model

According to quantum physics, the physical world and its reality, is just a product of our observations. We create the world that we experience through our perception of it. In its essential state (atomic or cosmic subquantum micro), the body is made of energy and information, not solid matter. This is energy and information arising from the endless fields of energy and information spanning the entire universal creation.

Penrose (1994) attacks and almost ridicules those who argue that the artificial intelligence of computers can reproduce human attributes, including consciousness. Penrose, based on the mathematical theorem of Gödel and his subsequent elaborations, concludes that no deterministic system, based simply on set rules, can explain the creative powers of the mind. This nullifies the claim of classic physics, computer science, neurobiology, etc., to structure themselves into a complex deterministic phenomenon of consciousness. Penrose says that only the peculiar characteristics of non-deterministic quantum physics could begin to explain consciousness, within a theory that involved quantum phenomena, macro physical and conditions of non-locality. It is important to note that local conditions are not known in quantum physics, quantum systems are non-local, this means, instant communication instant parts, without being time duration between communication of an event from one point to another system. The model proposed by Penrose proposes a concept of the universe as "non-local", at the quantum level everything that happens in a corner any of our cosmos is immediately 'felt', "meaning" for any another.

Penrose also indicated that probably is in the microtubules, the microscopic tubes that form the skeleton of cells included in the neurons, where the complicated interactions occur at the quantum level and this gives their "magic" character, "mysterious" from the point of view of science, what we call consciousness.

Quantum physics explains that at the quantum level, particles that come from the same source are entangled regardless of space and time (Hu & Wu 2010). This means that two entangled particles can affect and communicate with each other instantaneously regardless of the space between them. The trend to explain consciousness by applying quantum theories has gained popularity in recent years. In Valverde (2018), we proposed a model based on quantum theory and supported with lab experiments with the seven proposed statements are:

1. What consciousness is able to perceive with its five senses is not reality. Quantum physics has shown that space and time are illusions of perception. Our body cannot really be a reality if it does not occupy most of the space it seems to occupy, quantum physics revealed that the shape of the interior of an atom is almost entirely empty space and that matter is made of concentrated vibrating energy. Time is also an illusion and it represents a sequence of linear events that the brain generates based on perceived energy around every 25 milliseconds.
2. The model proposes that consciousness is non-local and can work independently of the physical brain. Nonlocality or “action at a distance” is the nature of consciousness. Human Consciousness is non-spatial and non-temporal and not in the brain but in prespacetime. Consciousness is multidimensional, it can exist outside the three-dimensional reality.
3. The model explains that we live in a collective consciousness that connects all the consciousnesses of the universe to the supreme consciousness.
4. Consciousness is likely play important roles in quantum effects such as in the wave function collapse, this is the foundation of the reality that we perceive.
5. Conscious intentions likely have physical effects on matter at distance due to the entanglement quantum effect.
6. Materialistic theories for the explanation of consciousness are likely invalid (Neuroscience).
7. Brain is a computer processor and interface between human Consciousness and the external world.

3. The quantum consciousness model and Sol Collazo’s Non-human intelligence encounter

Sol Collazo a resident of San Francisco del Rincon in Guanajuato Mexico claimed to have been contacted by beings of very high dimensions. These beings created a deposit of what she calls Akasha energy on December 21, 2012. The following year they (Non-human intelligent beings) taught her the processes of distillation of this energy (figure 1), the final product in crystal form is depicted in figure 2. In 2014 they asked her to take pictures in this Akasha energy deposit. They came to give her the theory that corresponded to this event. Sol claims that the Akasha substance has therapeutic properties. Sol also claims that Akasha helps to develop consciousness by increasing the level of intuition. During the development of this article, we will present the theory that was presented to Sol with the intention to understand the origin, evolution process and energy

model of consciousness and its relationship with the proposed quantum consciousness model.

Figure 1. Akasha deposit

Figure 2. Akasha in crystal form after distillation process

The author of this article had a meeting with Sol and she shared with the author her experiences and teachings learned from these higher dimensions beings. According to Sol, at the beginning of the world, everything was pure energy. This energy that occupied all the space has gender, which is feminine and masculine which is represented on a parchment of dark matter and antimatter. This is consistent with the Gospel of John 1:1 that explains that at the beginning was the Word, and the Word was with GOD, and the Word was GOD. This energy is the GOD energy that creates everything. According to Canetti, Drewes & Shaposhnikov M. (2012), there is observational evidence for a matter–antimatter asymmetry in the early universe, which leads to the remnant

matter density we observe today.

This energy has polarity, polarity is a universal principle (Levarie 1980). Everything is impregnated with these 2 energies: antimatter and dark matter. According to Jungman, Kamionkowski & Griest (1996), there is almost universal agreement among astronomers that most of the mass in the Universe and most of the mass in the Galactic halo is dark matter. This is what forms the vibrations in the universe, the vibration that pulses of energy. Everything is permeated with this vibrating energy. Then these 2 energies are the beginning of everything.

Figure 3. Figure 10 String of Quantum Energy in Sol's Akasha deposit

This energy that creates everything is depicted in Figure 3. This picture was given to Sol by the Non-human intelligent beings and taken from her own property deposit of this energy. These strings of energy resemble quantum string theory that explains how all the particles, and all of the forms of energy in the universe (Vimal 2010) (Copeland & Kibble 2010), could be constructed by hypothetical one-dimensional quantum "strings. String theories initially supported the possibility of ten dimensions (Dixon & Harvey 1986). Super-gravity theory also played a significant part in establishing the existence of the 11th dimension (Hořava & Witten 1996). These "strings" vibrate in multiple dimensions, and depending on how they vibrate, they might be seen in 3-dimensional

space as matter, light, or gravity. It is the vibration of the string which determines whether it appears to be matter or energy, and every form of matter or energy is the result of the vibration of strings. These strings are the “internet” of the universe that can be used to transport energy and information across the universe. Some believe that strings connect all the living beings of the universe with the supreme consciousness (Valverde 2018). This is consistent with the Quantum Consciousness model that explains that everything is made out of vibrating energy (Valverde 2018). Grinberg-Zylberbaum (1998) talked about the interaction of human beings with an informational matrix or informational field that encompasses and envelops everything and that contains all the information in each of its portions. Our brain interacts with that informational field that is classified as a quantum field, current physicists speak of a space field or zero point energy. This quantum field is responsible according to Grinberg-Zylberbaum (1998) for the perceptual reality. This last theory seems to be consistent with the revelation of Sol of a quantum field responsible for the creation of everything.

According to Sol, these 2 energies are conscious, and they make the decision to create forms and to create these they created 4 energies. Figure 2 depicts 6 energies (dark matter and anti matter) and 4 energies: red, yellow, white and blue that represent the composition of consciousness. With these 4 energies (red, yellow, white and blue) and with these 2 energies (dark matter and anti-matter), the dimensions, the planes of existence were created. The Akasha deposit in Sol’s property contains conscious energy that is composed by these 4 energies that according to Sol are used to create all conscious living beings in the universe.

The red represents the emotional or astral body. The yellow the etheric body, this body together with the white energy that represents intentionality gives to a conscious being self-awareness or self-consciousness. The blue represents the mental body that embeds the creative mind and together with the white energy that represents intentionality gives origin to the physical planes. This is consistent with the quantum consciousness model described by Valverde (2018) that proposes that consciousness and conscious intentions are responsible for the physical reality that we perceive. This classification is similar to the complementary medicine classification of body energy systems that explain that the astral body is a subtle energy system that contains the etheric body, chakras and meridians and an electrical body that covers the brain, heart and muscles (Freshwater, 1997). This classification is also consistent with Anthroposophical Medicine that recognizes that health and illness are directly related to our states of consciousness, and it views illness as an opportunity to create a new state of physical, emotional, and spiritual balance (Bott 1996).

Figure 4. Conscious Energy (Akasha)

According to the Genesis, GOD said to Adam and Eve “Do not eat from the tree of the knowledge of good and evil”. Then the snake came and told Eve to “eat from the tree of the knowledge of good and evil”. The snake added “They don't want you to eat from the tree of the knowledge of good and evil, because they don't want you to become like GOD”. According to Sol, the Genesis explains with the story of Adam and Eve the concept of duality. When the soul is created, the soul can make the decision to eat from the tree of the knowledge of good and evil. According to Sol, our existence comes from our soul’s decision to eat from the tree of the knowledge of good and evil.

Sol continues to explain that when we leave our cosmic origin, we start our journey in the first dimension as a cosmic larva because at the beginning we do not even have a planet to exist. These souls of only one dimension are called Karpin souls. After some level of evolution, these souls deserve to start going down to the planets, to be souls as group souls. The soul then continues its evolution journey as a mineral, then vegetable and after animal as part of group souls. At this point the soul does not have individuality yet. A soul only reaches individuality when it reaches the 3rd dimension. This is consistent with the teachings of Carl Jung that explains that we are in a process of individuation process in this plane of existence (Jung 2019). Jung explains that existence is about individuation of the soul.

Once we reach the 3rd dimension level of existence, we already gathered all the 4 energies. In a single body we have an astral body, etheric body, mental body and intentionality. These four energies through the mental body with intentionality give existence to the physical body. These teachings are very similar to Buddhism (Capper 2020). Thanks to these 4 bodies (astral, etheric, mental and physical) that we have, we are responsible for refining the 2 energies (dark matter and anti-matter) that give existence to the dimensions.

Because we have the duality, we are subject to these 2 energies that can be constructive or destructive. These two energies also responsible for the destruction of the physical bodies that are in the 3rd dimension. This is the way to build an equilibrium in universe. This is similar to Valverde (2019a) that suggests that death is necessary for evolution to happen and restore a balance in the universe.

Sol also explains that, if a person is mishandling these 2-dimensional energies through these 4 energies, instead of being in a person's favor these energies can be against a person. This is part of our challenge, that all the time we are dealing with that imbalance. According to Sol, the disease is due to imbalances of energies. This is also suggested by Valverde (2019b) that explains that illness is meant to teach consciousness how to align to nature and restore a balance in the universe.

With these 4 energies, a human can be vibrating in the 18th dimension or in the 9th or 10th dimension because these energies create vibrational fields. This supports the multidimensional nature of human consciousness described by Valverde (2018). These energies would help us to evolve from the 1st dimension to an individualized homo sapiens human, and then move on to super men, and eventually reach the level of biological engineers that are creators of universes. This is also revealed in Valverde (2020a) that explains the different levels of evolution of man that includes super man and biological engineers.

Sol also explains that the blue energy that is responsible of the mental body, vibrates at the 4th dimension. This is because this energy that is responsible to create the physical reality in the 3rd dimension also operates at a very close frequency or dimension. The red energy responsible for the emotional vibrates between the 5th and 16th dimension and the yellow energy that is responsible for the etheric body vibrates between the 17th and 18th dimension. The white energy responsible for intentionality operates between the 4th and 18th dimension as it works with the mental for the manifestation of the physical reality and etheric body for self-awareness or self-consciousness.

Matter is manifested as a combination of all the frequencies from the 4th to the 18th dimension. A physical body is a reflection of the mental, emotional and etheric bodies. This is depicted in figure 4. This is also consistent with the teaching the physical body is a manifestation of more spiritual realities described in Valverde (2018).

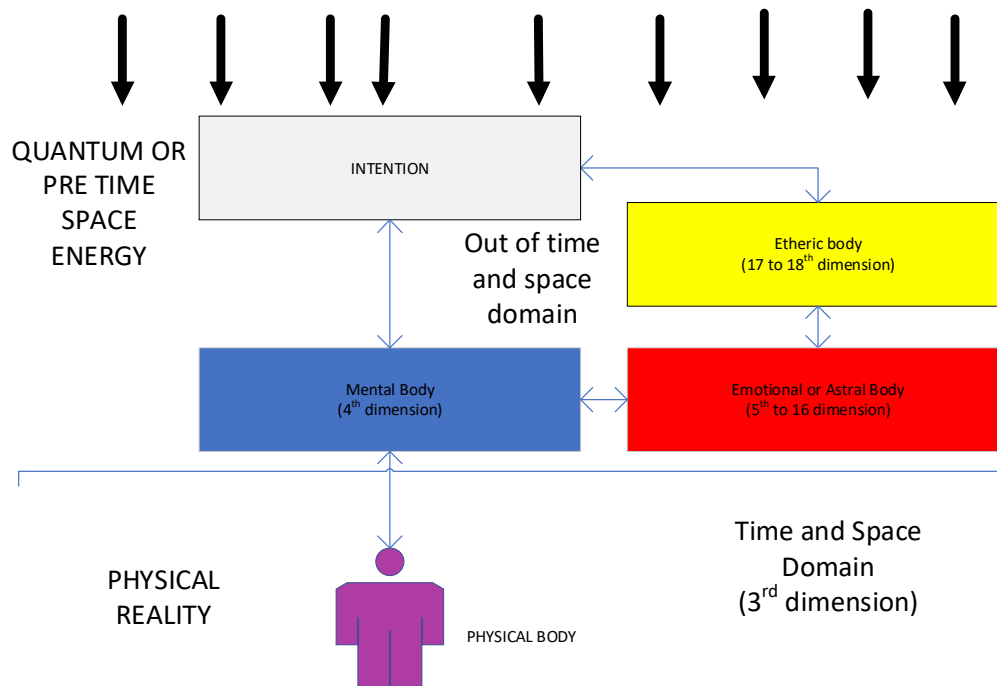

Figure 5. Consciousness Energy interaction with the Quantum field and Physical reality

Sol also teaches that we come prepared for immortality. This physical body comes prepared for immortality but because we do not know how to handle it, it is destroyed again. According to Sol, this is what the master Jesus taught that when he was on earth, that in order to come from mortality to immortality we need to learn how to handle the 4 energies that make up the etheric, astral body, physical and mental bodies. Once we can handle all those energies in the right way, the body does not have to disintegrate. This is consistent with the teachings of the Gospel of Thomas that explains that immortality is only earned through the mastery of consciousness (Valverde 2020b).

Sol also teaches that white energy in charge of intentionality is electromagnetic. This energy interacts with the blue energy that makes the creative mental mind for the manifestation of ideas

and desires in the physical world. The Buddhists, Taoists, Hindus, they have all spoken that the one who dominates the mind dominates everything (Wallace 2001). People who meditate like the yogis expand their consciousness. Many of the spiritual philosophies begin by touching this mental space in the 4th dimension.

Sol also talked about being contacted by the Pleiadians. She explained that this non-human intelligence race is still mortal. They die in a 3rd dimensional planet, in a good state of understanding of the 4th dimension, because this gives a lot of power as this gives them the ability to be aware of their next incarnation. She explained that those non-human intelligence beings that have reached the superman level, no longer have to reincarnate in planets of death, this is also explained in Valverde (2020). Pleiadians, all who come with ships are not yet in the supermen level. That is why many are here on earth, because they are seeking ascension, because it is with service that they evolve at this level. Marciniak (1992) describes them as a group of enlightened beings who have come to earth to help us discover how to reach a new stage of evolution. They no longer have diseases and already manage space time and with this they can travel through space with their spaceships. They get old when they want to, they can reach an age that they want as they manage time. For example, a person who is 1000 years old might look like a 20 year old person of this earth. As they no longer age, they can live 2000, 3000, 4000 years if they want. They can plan death and they are aware that they can reincarnate to keep evolving.

Figure 6. Pleiadian Spaceship

In our meeting with Sol, she contacted the Pleiadians telepathically and the author was able to witness the presence of several spaceships on top of her building, one of the pictures of these space and circled in red is in figure 6. According to Sol, these spaceships monitor the energy deposit for its security and also, they use this energy for their own purpose and operations. The author was able to witness a flow of energy that was visible in the form of waves of energy that were moving from the deposit towards the spaceships supporting Sol's argument.

4. Conclusions

In this article, a quantum consciousness model with seven principles supported with lab experiments and research is presented and similarities with the teachings of Sol Collazo in Mexico that explains that a quantum field is responsible our perceived reality. A model with 4 energies is presented as the main components of our consciousness, these 4 energies interact with the quantum field to create the reality that we live in. The different bodies of our consciousness are presented including the etheric, emotional, mental and physical bodies. The teachings of Sol confirm that we create our own reality by manifesting universal quantum energy. The article is meant to open the eyes of the reader to the quantum model of human consciousness that gives us a completely different view of the nature of human consciousness. The article also presents the efforts from non-human intelligent beings outside our reality to bring this information to humanity with the purpose of our evolution and better understanding of our nature.
